Press Release

Waterless Co.

Press Release Date: November 1, 2006

Waterless Co, LLC Small Case Study

Sure, California is having a lot of rain this year. However, anyone who has lived in the state for any period of time knows that could change at any time. In fact, California has had some of the worst droughts in the country.

That's why the astute San Diego City School system started installing waterless urinals back in 1997. Today, more than 70 units have been installed in the district, and it is estimated more than 4 million gallons of potable water are saved every year as a result.

When it came to selecting a waterless urinal system, the district decided to go with the oldest and most established no-water urinal manufacturer in the country-Waterless No-Flush(TM) Urinals by the Waterless Co.

Waterless No-Flush Urinals use absolutely no water. They look just like conventional urinals and install to the regular waste lines, but there are no flush water supply lines. Urine flows into a vertical trap cylinder, which holds a thin layer of BlueSeal®, a long-lasting and biodegradable sealant.

The combination trap and sealant blocks sewer gases and urine odors-protecting indoor air quality. And, the urinal bowl surfaces are highly polished. Urine drains quickly, keeping the

bowl dry, bacteria and germ free, and easy to clean.

"After a balanced consideration the Waterless urinal seems to be a water conservation fixture whose time has come," says the Energy and Engineering Department of the Secretary of Defense. "It clearly reduces maintenance costs and you save 1.5 to 3 gallons of water per usage. In any new construction, or whenever you plan to replace a flush urinal, Waterless urinals should be given serious consideration."

About Waterless Waterless Co. is the manufacturer of No-Flush urinals, the new urinal standard for restrooms that offer environment friendly plumbing fixtures without compromising functionality and hygiene. Waterless Co. is the originator of this type of water conserving technology and has been serving the U.S. market since 1991. They may be reached at:
